

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A communication terminal apparatus capable of receiving information from a communication system network, comprising:

receiving means for receiving information from the network;

a display configured to display information;

illumination means for illuminating the display;

a detector configured to detect completion of information reception by the receiving means from the network;

display control means for causing the display to display the information received by the receiving means from the network, if ~~when~~ the detector has detected the completion of the information reception; and

an illumination controller configured to cause the illumination means to illuminate the display, if ~~when~~ the detector has detected the completion of the information reception.

Claim 2 (Currently Amended): A communication terminal apparatus capable of receiving information from a communication system network, comprising:

receiving means for receiving information from the network;

a display configured to display information;

illumination means for illuminating the display;

illumination detecting means for detecting an intensity of illumination;

a detector configured to detect completion of information reception by the receiving means from the network;

display control means for causing the display to display the information received by the receiving means from the network, ~~if when~~ the detector has detected the completion of the information reception; and

an illumination controller configured to cause the illumination means to illuminate the display, ~~if when~~ the detector has detected the completion of the information reception, and the intensity of illumination detected by the illumination detecting means is not more than a predetermined value.

Claim 3 (Currently Amended): A communication terminal apparatus capable of receiving information from a communication system network, comprising:

receiving means for receiving information from the network;

a display configured to display information;

illumination means for illuminating the display;

timer means for measuring time;

a detector configured to detect completion of information reception by the receiving means from the network;

display control means for causing the display to display the information received by the receiving means from the network, ~~if when~~ the detector has detected the completion of the information reception; and

an illumination controller configured to cause the illumination means to illuminate the display, ~~if when~~ the detector has detected the completion of the information reception, and time measured by the timer means falls within a predetermined time period.

Claim 4 (Canceled).

Claim 5 (Currently Amended): A communication terminal apparatus capable of receiving information from a communication system network, comprising:

receiving means for receiving information from the network;

a display configured to display information;

illumination means for illuminating the display;

display control means for causing the display to display the information received by the receiving means from the network; and

an illumination controller configured to cause the illumination means to illuminate the display, if when the display control means has started display of the information from the network on the display.

Claim 6 (Currently Amended): A communication terminal apparatus capable of receiving information from a communication system network, comprising:

receiving means for receiving information from the network;

a display configured to display information;

illumination means for illuminating the display;

illumination detecting means for detecting an intensity of illumination;

display control means for causing the display to display the information received by the receiving means from the network, if when the detector has detected the completion of the information reception; and

an illumination controller configured to cause the illumination means to illuminate the display, if when the display control means has started display of the information from the network on the display, and the intensity of illumination detected by the illumination detecting means is not more than a predetermined value.

Claim 7 (Currently Amended): A communication terminal apparatus capable of receiving information from a communication system network, comprising:

receiving means for receiving information from the network;

a display configured to display information;

illumination means for illuminating the display;

timer means for measuring time;

display control means for causing the display to display the information received by the receiving means from the network; and

an illumination controller configured to cause the illumination means to illuminate the display, ~~if when~~ the display control means has started display of the information from the network on the display, and time measured by the timer means falls within a predetermined time period.

Claim 8 (Canceled).

Claim 9 (New): The communication terminal apparatus according claim 1, further comprising:

sound generating means for generating a sound; and

sound generation control means for causing the sound generating means to generate the sound to inform a user of the completion of the information reception, if the detector has detected the completion of the information reception.

Claim 10 (New): The communication terminal apparatus according claim 2, further comprising:

sound generating means for generating a sound; and

sound generation control means for causing the sound generating means to generate the sound to inform a user of the completion of the information reception, if the detector has detected the completion of the information reception.

Claim 11 (New): The communication terminal apparatus according claim 3, further comprising:

sound generating means for generating a sound; and

sound generation control means for causing the sound generating means to generate the sound to inform a user of the completion of the information reception, if the detector has detected the completion of the information reception.

Claim 12 (New): The communication terminal apparatus according to claim 5, further comprising:

sound generating means for generating a sound; and

sound generation control means for causing the sound generating means to generate the sound to inform a user of the completion of the information reception, if the display control means has started display of information on the display.

Claim 13 (New): The communication terminal apparatus according to claim 6, further comprising:

sound generating means for generating a sound; and

sound generation control means for causing the sound generating means to generate the sound to inform a user of the completion of the information reception, if the display control means has started display of information on the display.

Claim 14 (New): The communication terminal apparatus according to claim 7, further comprising:

sound generating means for generating a sound; and

sound generation control means for causing the sound generating means to generate the sound to inform a user of the completion of the information reception, if the display control means has started display of information on the display.

Claim 15 (New): A communication terminal apparatus capable of receiving browser data from a Web site, comprising:

receiving means for receiving the browser data from the Web site;

a display configured to display the browser data;

illumination means for illuminating the display;

a detector configured to detect completion of the browser data reception by the receiving means;

display control means for causing the display to display the browser data received by the receiving means from the Web site, if the detector has detected the completion of the browser data reception; and

an illumination controller configured to cause the illumination means to illuminate the display, if the detector has detected the completion of the browser data reception.

Claim 16 (New): A communication terminal apparatus capable of receiving browser data from a Web site, comprising:

receiving means for receiving the browser data from the Web site;

a display configured to display the browser data;

illumination means for illuminating the display;

display control means for causing the display to display the browser data received by the receiving means from the Web site; and

an illumination controller configured to cause the illumination means to illuminate the display, if the display control means has started display of the browser data from the Web site on the display.
